Software Developer focused on
building accessible products for the web

Relevant Experience

Full Stack Developer - **TorneosGG**

Jan - May 2024

I specialized in developing chat systems and reworking blog sections with SSR Feed for tournament-related projects. I participated in comprehensive reworks of main projects, provided ongoing support, optimized code for performance, and collaborated with design and QA teams to implement changes and ensure quality.

Software Developer - **Imagine Apps**

Mar 2023 - Jan 2024

I specialized in developing web pages and applications using React, Angular, and diverse libraries. I offer ongoing support, optimize code for performance, and conduct rigorous code reviews for quality assurance. I manage NoSQL and SQL databases, design APIs for seamless integration, and facilitate efficient communication between components and external services.

Full Stack Developer - **Blockdemy**

May - Nov 2022

In my role, I led the main website, providing ongoing support for optimal functionality and user experience. I implemented automated systems for prompt and accurate event date updates, eliminating manual intervention. I optimized guide distribution through efficient automated processes, ensuring swift delivery. Rigorous unit testing of website components guaranteed reliability and high performance throughout the web application.

Software Developer - **Amazonias RGA**

Jan 2021 - Feb 2022

I specialized in building robust APIs and user-centric web apps, prioritizing seamless experiences and functionality. Rigorous testing ensures top quality and reliability. I excel in structuring projects, optimizing tech stacks, and creating comprehensive documentation for efficient development and future enhancements.

Skills

Programming Languages

C#, TypeScript, JavaScript, Node, Go - HTML, CSS

Libraries & Frameworks

React, Redux, Next.js, Astro, Angular, Nest.js, Express, .NET, Serverless, Tailwind, GraphQL, Turborepo, Socket.IO, tRPC, gRPC

Tools & Platforms

Git, GitHub, Bitbucket, Vercel, AWS, WordPress, Webflow, Docker, Figma, Jira, Linear

Databases & ORM's

MySQL, MongoDB, PostgreSQL, Redis, Mongoose, Entity Framework, Sequelize, TypeORM, Drizzel

Projects

TIG

A CLI tool for managing Git configurations, simplifying SSH credential and repository setting switches across multiple projects.

Workspace

A CLI tool for managing Docker containers, enabling quick access, streamlined commands, and efficient environment configuration

File System

A Go package that simplifies file operations like creating, reading, and managing files, reducing boilerplate code for developers.

Education

Alura

Education Backend

Interests

Science fiction movies, handball, volleyball, reading, Terraria, and Lofi Hip Hop music
